To Whom It May Concern:

I would like to personally recommend Robert Kinzie and his company, Kinzie Backup Generator Systems to you.

He and his firm recently installed a 100 kw generator at my home. During the process we built a roofless masonry building for the generator to help cut down on the noise, and to date there have been no complaints from my neighbors.

For the few times the generator has been activated, during the nine months it has been in service, we've barely been able to notice the transition. The generator runs the entire all-electric 600 amp house, where the major load has never exceeded 112 kws.

I have found Mr. Kinzie to be a very reliable and resourceful contractor, who follows up on every detail. What I especially appreciate is his work ethic. If he proposes something – it will definitely be something needed and not something just sold to you. His attitude is to fix a generator, if at all mechanically and economically feasible, rather than just randomly replace. His proposal to me was very fair and reasonable. Since the installation he has called a number of times to make sure everything is in working order. I couldn't be more pleased with the whole installation, from start to finish, and have no qualm about recommending Mr. Kinzie.

And I will close by complimenting Mrs. Kinzie, also. As the person first on the phone and behind the paperwork, she is extremely cooperative and helpful. They make a great team.

Sincerely,

Sidney O. Dewberry  
Chairman
